Dual 12" (300mm) Preloaded Ported Enclosure With Slipstream Port. Looking to put some bump in your trunk, JBL's preloaded Subwoofer enclosures will put you up front and center for the ultimate live performance. No one has as much experience designing and building subwoofer enclosures as JBL, Inc. Our speaker enclosures have traveled thousands of miles, touring with some of the world's top bands, and have filled stadiums, auditoriums and local clubs with rockin' bass for half a century. Our car audio subwoofer enclosures, which are built to the same exacting standards as our professional boxes, are designed to be rugged and sound great. GT5 enclosures feature 3/4" medium-density-fiberboard (MDF) construction, high-quality binding-post terminals and GT5 woofers. GT5 enclosures are available in single- or dual-band-pass configurations. And, unlike so many one-note-wonder enclosed subwoofers, GT5 enclosures feature a wide-bandwidth design, which provides more output between 20Hz and 40Hz, and ensures you get all the bass you've paid for. The JBL ® GT5-1204BP provides superior performance compared to that of competing loaded enclosures, primarily because of its revolutionary Slipstream port, which provides lots of surface area outside the box so that the air stays stuck together â€“ our engineers have named it the Adverse Pressure Gradient.â„¢ This gradual change from high pressure to low pressure eliminates the audible distortion called â€œwhacking." Because the area of the port in the middle is much smaller than the mouth of the port, the port can be MUCH shorter than a cylindrical port with a surface area the same as the Slipstream port's mouth; this means it can fit into [illegible] boxes. [illegible] outside the box is maximized by increasing pressure, and [illegible] inside the port is minimized by reducing velocity. The benefit of this proprietary technology is more bass output with greatly reduced port noise and distortion. General Power Handling: RMS 550 Watts Power Handling Peak 1600 Watts Sensitivity (2.83V @ 1m) 90dB Frequency Response 40Hz â€“ 200Hz Dimensions 889mm x 318mm x 393mm (35" x 12-1/2" x 15-7/16") Impedance 2 Ohms Enclosure Design Vented
