What is abortion?(((0633523662)))

Abortion is when a pregnancy is ended so that it doesn't result in the birth of a child. Sometimes it is called 'termination of pregnancy'.

Jabulani Women's Clinic cares for women with an unplanned or unwanted pregnancy. We treat thousands of women who've decided that abortion is the right choice for them, and give advice and counselling to women who don't know what to do next.

There are two types of abortion treatment, 'Medical' and 'Surgical' abortion

1. Medical abortion: The abortion pill

Some women feel that a medical abortion is a more natural process. There are two types of medical abortion

Abortion pill (also known as early medical abortion) up to 10 weeks

Involves taking medication to cause an early miscarriage (women experience cramping, pain and heavy bleeding).

No surgery or anaesthetic.

Abortion pill from 10 weeks up to 24 weeks

Involves taking medication to cause the womb to contract and push out the pregnancy.

2 visits to the clinic are needed.

Sometimes an overnight stay is needed on the 2nd visit – check when you book.

2. Surgical abortion

Surgical abortion involves a quick, minor operation. There are two types of surgical abortion:

Vacuum aspiration up to 15 weeks

This is a procedure where the pregnancy is removed using a vacuum. It can be done with local or general anaesthesia. The quick one is very time efficient as you can leave the clinic straight away and drive home.

For pregnancies up to 10 weeks it can be done with sedation, relaxed and comfortable.

One visit to the clinic and you go home the same day.

Duration and evaluation between 1 and 2 weeks

Carried out with general anaesthetic.

The pregnancy is removed using narrow forceps passed through the neck of the womb and some gentle suction.

One visit to the clinic and you go home the same day.
