

Network and WiFi installation amp maintenance

Location **Gauteng, Johannesburg**
<https://www.freeadsz.co.za/x-130147-z>

Network Cabling or Structured Cabling forms the backbone for any business's internal network; even where Wi-Fi is the order of the day, the quality of the cabled installation will still form the basis of the network reliability.

X-Bytes Repair Centre is proud to be able to offer high quality structured cabling installations at all sizes of businesses. Our network cabling teams pride themselves on doing neat and tidy installations which are completed timeously due to their immense combined experience.

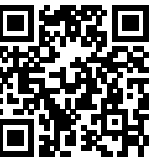

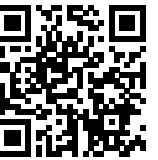

We can install networks using CAT5e up to 1Gb/s or Shielded CAT5 cable for areas where a lot of background or magnetic noise would otherwise interfere with network traffic signals. We have extensive experience when it comes to installing CAT6 or Shielded CAT6 networks as well, where the client wishes to future proof his organisation and get it ready for 10Gb/s local throughput.

X-Bytes Repair Centre offer many Wi-Fi solutions for any business size, from centrally managed, large Wi-Fi networks through to small networks which span only a handful of rooms. A decent and reliable Wi-Fi network gives the client the ability to move around his or her office freely without the need to plug in cables and the flexibility to always be connected to the internet and other local resources.

Once the Network Cabling & Wi-Fi installation is complete, our advanced networking team, will implement network security on your private network, which can limit access to the internet for various staff

members or guests and create Virtual LANs inside your organisation which will allow you to segment your network into different sections for different departments or projects.

Our network cabling and Wi-Fi services are tailored to fit your specific needs and will ensure your network is always up and running. X-Bytes Repair Centre will leave your network secure and ready for the future.
