This is a brand new, affordable OE Specification replacement product. 100% Factory tested and built to strict quality control standard to ensure high performance and guaranteed to deliver better fuel economy. Above picture for illustration purposes only.

Product Description

An automotive charging system is made up of three major components: the battery, the voltage regulator and an alternator. The alternator works with the battery to generate power for the electrical components of a vehicle, like the interior and exterior lights, and the instrument panel. An alternator gets its name from the term alternating current (AC). Alternators are typically found near the front of the engine and are driven by the crankshaft, which converts the pistons' up-and-down movement into circular movement. Alternators produce AC power through electromagnetism formed through the stator and rotor relationship. The electricity is channelled into the battery, providing voltage to run the various electrical systems.

?

Defective Symptoms

Alternators work tirelessly to produce electricity for the modern vehicle is subject to great wear and tear so it is not uncommon for an alternator to fail. It is quite easy to tell if they are failing as they will show signs of wear.

1. Dimming Lights: If your vehicle's lights are dimming or flickering, it could be a sign of a failing alternator. This is because the alternator is responsible for providing the electrical power to the lights.

2. Battery Issues: If your battery is constantly running low or if it takes a long time to start the car, it could be a sign of a failing alternator. This is because the alternator is responsible for recharging the battery.

3. Noisy Alternator: If you hear a grinding or whining noise coming from the front of the engine, it could be a sign of a failing alternator. This is because the alternator is responsible for generating electricity, and if it is failing, it will make noise.

4. Electrical Problems: If you experience any electrical problems, such as a radio that won't work or a power window that won't go up, it could be a sign of a failing alternator. This is because the alternator is responsible for providing the electrical power to the vehicle's systems.

5. Smell: If you smell a burning or overheating odor coming from the front of the engine, it could be a sign of a failing alternator. This is because the alternator is responsible for generating electricity, and if it is failing, it will overheat and produce a smell.

6. Warning Light: If you see a warning light on the dashboard, such as a battery or alternator light, it could be a sign of a failing alternator. This is because the alternator is responsible for providing the electrical power to the vehicle's systems, and if it is failing, it will trigger the warning light.

7. Poor Performance: If your vehicle is running poorly, such as stalling or having a rough idle, it could be a sign of a failing alternator. This is because the alternator is responsible for providing the electrical power to the vehicle's systems, and if it is failing, it will affect the engine's performance.

8. Overheating: If your engine is overheating, it could be a sign of a failing alternator. This is because the alternator is responsible for generating electricity, and if it is failing, it will overheat and cause the engine to overheat.

Normally, when you turn on any accessory such as the dashboard lights, radio or blinkers, the accessory is powered indirectly by the alternator, which keeps the battery charged. When the alternator is bad, however, it cannot produce enough electricity to operate all electrical accessories at maximum capacity. The dash and headboard lights thus may dim, signal lights may operate slowly and music players may not function.

Jumps

The alternator is responsible for keeping the charge of the battery high. When it doesn't operate properly, the battery voltage may drop too low to start the car. If you find that your car has needed jumps lately or that it frequently goes completely dead, then the alternator may be the.
