Ashtray Two-Way Audio Device with Auto Call Feature (Sound Activation, Tri-Band Worldwide Use) - G373

Disguised as an innocent-looking ashtray, this two way GSM audio device calls you when it detects sounds around its vicinity. Simply insert a GSM SIM card and program it to your desired phone number for call back and now you're in the business!

Trying to find out the truth about what's being said behind your back? Now you can from a distance. You can even place several of these ashtray audio devices and set them up at your desired locations like the bedroom, living room, conference room or office. Just insert a SIM card into the audio device and your bug is active and ready for action!

Once you have successfully paired your number with this audio device, simply make a call and you can instantly listen in to conversations! The built-in microphone works up to a 7 meter radius, so set this bug up wherever you want. With sound activation function, the audio device will even call you when it hears people talking! This feature makes it much more advanced than other GSM audio bugs on the market today.
