What is HUD?

HUD is short for head up display. HUD is now widely used in the aircraft's flight aids. Pilots can get important information By HUD. And they do not need to look down their heads HUD first appeared in military aircraft to decrease the frequency of pilot looking down their head to see the dashboard. Because HUD Can increase the safety, many aircrafts are equipped with HUD.

Features:

- Automatically adapt to the automobile models with OBD II (Bus Automatic Diagnostic System) interface.
- Display the engine speed, speed, temperature, fuel consumption and other information on the front windshield of the driver's eye level.
- The precise, HD and high-brightness LED display, easy to read information.
- The gear shift warning, conducive to learners.
- The display brightness can be adjusted.
- Plug-and-play.
- 100% Brand guaranteed and high quality.

Specification:

- Display: LED Digital
- Environment Temperature: -40c ~ +80c at atmospheric pressure 86-106KPa
- Alarm Sound Level: over 30db

Working Voltage: 9V~16Vdc(12Vdc/400mA)

Power Consumption: 14x100mA

1. Universal adapt. HUD can adapt to all types of vehicle which are with OBD II or OBD(On-board Diagnostic System).

2. Comprehensive display. HUD can display many parameters at the same time as follows, vehicle speed, engine speed, water temperature (voltage, throttle valve position, ignition advance angle, time of 100 km acceleration), fuel consumption, mileage, low fuel tips, engine failure.

3. Diversiform display mode. Driver can choose normal display mode, high-speed display mode and automatic display mode.

4. Free switch. Km and mile can be switched freely to meet the need of inch auto meter. Suitable size. The display area is 5.5 inches which is very clear for driver to read data.
