## State-of-the-Art Build-Quality Nets Sonic Results

AudioQuest Columbia is built around AudioQuest's wonderful PSC+ copper conductors, an ultra-pure copper that has delivers unmatched even-balanced frequency response with speed, detail, and dynamics. Polyethylene tube insulation on all three of the conductors (positive, negative and ground) minimize the interaction between the the conductor and the insulation for greater air and transparency. AudioQuest's proprietary Dialectic-Bias-System keeps noise at bay and dramatically lowers the noise floor of the cable.

## Patented Noise-Dissipation System Leads to Incredible Value

The AudioQuest 72V DBS system smooths frequency response and the Cold-Weld connectors eliminate harshness. The three-layer Noise-Dissipation System protects the entire cable from the deleterious effects of airborne noise. Standing on its own, Columbia is a wonderful-sounding cable capable of bringing out the best in any system, but perhaps the most astonishing thing about Columbia is how close it sounds to its big brothers at a fraction of their prices. Maybe it's not so surprising after all. Columbia uses the same conductors as Colorado, the same Noise-Dissipating shielding as Niagara and the same connectors as Sky, and costs a fraction of their.
