This course helps young adolescents to develop their voice whilst eliminating any speech impediments. The course was devised on the basis of using drama exercises (as a template), because I dealt with a lot of students who don't understand what is expected of them when correcting voice. When using drama exercises this helps them to understand (in laymen's terms) all elements which constitutes correct speech. The exercises in the course focuses on combining an arrangement of concepts, which will help them, achieve great results.

Some Common Speech Disorders:

- Stuttering interferes with fluent speech,
- Cluttering makes speech difficult to understand,
- Articulation Disorders lisping, cleft palate,
- Apraxia (dyspraxia) -also known as oral-motor speech disorder,
- Dysarthria Paralysis, weakness or generally poor coordination of the muscles of the mouth,
- Speech Sound Disorder Omissions, Substitutions, Distortions,
- Phonation Disorder hoarse, raspy, or pitch changes,
- Resonance Disorders Hypernasality and Hyponasality.

I have had a lot of success with this course...I look forward to hearing from you soon!
