Cipzer Baby Cura is Unani medicine for children's diseases. Babies often cry for hours in a row because of abdominal pain or gas. This condition is called colic pain which is treated with Baby Cura. This medicine is commonly prescribed for the treatment of flatulence and abdominal pain. This medicine is used to treat colic pain and gas in the stomach in children. It has properties to prevent bloating of the stomach and reduce cramps. Baby Cura is prescribed to a baby for the treatment of stomach problems, indigestion, and cramps. This releases the trapped gas in the stomach and gives relief from pain. Stomach worms are more in young children because they take things kept here and there in their mouth and sometimes they also eat soil. They have a great impact on the health of children. Children eat or drink milk, but their body does not get its nutritious elements. Nausea, vomiting, flatulence, swelling of the body, and diarrhea indicate that everything is not right in the stomach. For children who have worms in their stomachs, their physical development stops. There is a pain in the chest and there is constant tiredness. There is severe pain in the upper part of the stomach even when there is indigestion. Indigestion is also called dyspnea in which symptoms like abdominal pain; nausea, vomiting, and flatulence are seen. This problem of children is also corrected with Baby Cura.
