misinformation. At the same time, the abortion industry is also using the Internet to spread misinformation. For example, the National Abortion Federation (NAF) has a website that contains a list of "abortion providers" that are "accredited" by the NAF. This list is used to inform women of the locations of abortion providers, but it also contains information about the providers' qualifications and the services they offer. This information is often used to influence women's decisions about whether to have an abortion.

How does an Abortion Pill work?

Both abortion pills, mifepristone and misoprostol, are usually used in order to terminate a pregnancy. Mifepristone causes the embryo to detach from the uterus thereby cutting off essential nutrients and oxygen carried by the blood. Misoprostol is then taken two days later and triggers the evacuation of the embryo remnants through the vagina. This often appears as a heavy period
